

What are the Advantages to Laser Surgery?

Packerland Veterinary Center is proud to be one of the first veterinary hospitals to provide the many advantages of laser technology to our patients. Now your pet can benefit from the same properties of a laser that human patients have experienced for over twenty years; less pain, swelling, and discomfort after surgery, and the ability to resume normal activities sooner. Packerland Veterinary Center has made this substantial investment in order to offer you the best possible healthcare for your pet.

- Less pain and swelling promotes a quicker recovery.
- Less bleeding simplifies surgery and may reduce the need for prolonged anesthesia.
- The sanitizing effect of the laser beam reduces the risk of infection.
- Less trauma for your pet.

Laser surgery has many benefits and because it seals blood vessels, lymphatic tissue and nerve endings while cutting tissue, the sutures post operatively do need to be in place longer than the other traditional methods.

Hours of Operation

Monday 8am - 8pm

Tuesday 8am - 8pm

Wednesday 8am - 8pm
6:30am Early Morning
Check-In

Thursday 8am - 8pm

Saturday 8am - 3pm

Friday 8am - 5pm

Sunday Closed

Typically, patients for laser surgeries are admitted between 8am and 9am Monday-Friday. Often, surgery is then performed between 9am and 12pm. Most patients are then able to go home the same day, after 3pm. One exception are the declaw patients, they stay overnight as the paws are bandaged and this also ensures appropriate activity restriction immediately post-op. Declaw patients may go home any time after 9am the day after surgery. Upon discharge, our staff will meet with you and go over all discharge instructions including activity restrictions and at home pain management.

What is a Laser?

A laser is a device that produces an extremely powerful and concentrated beam of energy. In fact, our surgical laser creates a beam that is even more powerful than a similarly-sized beam leaving the surface of the sun. There are many exciting uses for lasers in medicine, manufacturing, space exploration, research, telecommunications, and military applications. Years of experience in veterinary and human medicine went into the design of our laser, which was made specifically to provide superior care for pets.

Is Laser Surgery Appropriate For My Pet?

A laser can perform a wide variety of surgical procedures on cats, dogs, birds, and other animals. The staff at Packerland Veterinary Center will be able to tell you if your pet is a candidate for laser surgery and will help you decide if this is the best treatment option for your pet.

Common Laser Indications:

- Declawing
- Spays/Neuters
- Ear Polyps
- Lumps and Bumps
- Oral Surgery

The laser used at Packerland Veterinary Center is very versatile and allows for the use of various sized laser tips. This allows the surgeon to choose the size and width of the energy beam and allows us to customize the procedure for each individual patient.

What is Laser Surgery?

Traditional surgery with a scalpel or scissors can bruise or crush tissue. Packerland Veterinary Center provides owners with another option – Laser Technology! When we use the laser, only an intense beam of energy touches your pet, which minimizes the pain, swelling, and bleeding often associated with surgery.
